Power point talks about Bayesian data Analysis

I have created a few sets of slides that might be of interest. They are ideally loaded up into Powerpoint and watched as a slide show as they have a modest amount of animation in them.

a) The first talk is a general intro to Bayesian data analysis focussing on the background and how to do some simple analyses in JASP (free software).
   DSR bayes analysis goldsmiths 2019 part1.pptx

b) The second talk concerns Maximum Likelihood Estimation (MLE) and the comparison of models fitted using MLE. This talk has accompanying datasets and notes and matlab code to execute analyses. See slides for details.
   Bayesian data analysis part2.pptx

c) To be added
